A4 Checkpoint 1

Business Issue

My friends and I are creating a new Dungeons and Dragons campaign (DnD) and I am running the game as Game Master (GM). It is my first time running a game for a group larger than 1. There are so many items, monsters, and attributes to keep track of, I am wondering if I can find a way to organize it all, so that the game is fun, engaging, and not overpowered.

Dataset

I am using the following dataset: [D&D 5e stat blocks](#)
